

Sonoco Rebalers

Small footprint. Big profits.

Benefits:

- Simplify your supply chain by selling export tons with no rebale or third-party fees
- 10% average increase in premiums
- Personnel savings – Sonoco’s rebaler is fully automatic, requiring no operator
- Domestic market backup plans via Sonoco’s domestic mill network

Export for increased premiums.
A large regional grocery store chain experienced a 13% increase in premiums by generating export-quality bales on-site—all it takes is the Sonoco Rebalers.

Cut out the middle-man and convert your low-density domestic bales to more profitable high-density export bales.

How much would your recycling profits increase if you could convert your cardboard into high-density export bales right in your distribution center? For those who use Sonoco’s rebalers, the answer is 10% on average.

Sonoco’s low-profile rebaler machine is installed right in your distribution center, with a footprint of only around 600 square feet. It requires no added personnel—just a simple step for the forklift driver to load the cardboard into the machine.

Your high-quality bales will never be exposed to moisture or other substrates, empowering you to take advantage of a strong export market. And by doing the baling yourself, you’ll cut third-party rebalers out of your supply chain and reap the rewards yourself.
